## Care Instructions

3. User manual
- Always make sure that the instructions in this user manual are followed precisely. If these instructions are not followed correctly, this can result in fire or explosion that could cause damage to persons, property, or loss of life. Never use flammable liquids or vapors in the vicinity of a burning device.
  - Improper installation, adjustments or modifications to the equipment can result in injury or property damage. Read the installation instructions, safety precautions and operating instructions very carefully.
  - Do not leave the Cosivista unattended when it is in use or when it is connected to a gas cylinder.
    - What to do if the device emits a smell of gas:
      - o Shut off the gas bottle immediately and contact a technical gas specialist. Do not use the device until it is approved for use again.
    - Installation, maintenance, and service needs to be performed by a qualified gas technician in these cases.
  - Only use the Cosivista outdoors or in a well-ventilated area. Never use the Cosivista inside a building, house, garage or any other enclosed area.
  - Gas bottles must be stored outdoors and in well-ventilated areas. Make sure that gas bottles are out of the reach of children.
  - The Cosivista is best stored in a garage or well-ventilated area. Store the Cosivista only when it is disconnected from the gas bottle.
  - The Cosivista is not qualified as a cooking appliance and therefore must not be used as a cooking appliance.
  - Check for gas leaks at least once a month and every time a change is made to the unit.
  - Keep the area around the Cosivista clear of combustible liquids, materials and vapors. Never throw anything into the flames of the Cosivista.
    - Never use a fuel other than propane gas.
      - Turning on the Cosivista
        - Make sure the Cosivista is stable and in solid state.
        - Remove the protective cover.
      - Press the control button fully until you hear a slight ticking sound (this is the piezo ignition). If you do not hear anything when pressing the ignition button, you probably need to replace the battery. Keep the control button pushed in when you open the gas supply and turn the control button to 'HIGH' for gas supply. The burner should now ignite within 15 seconds. When the burner produces a complete flame, hold the control button for another 15 seconds. The flame should keep burning now. In case the flame goes out however, you should try the same process again and hold the gas supply button a little longer.
        - Switching off the Cosivista
    - Turn the control button towards 'LOW' to extinguish the flame. When the flame is extinguished entirely, you shut off the gas valve on the gas bottle.
    - Let the lava rocks and ceramic logs cool down completely and place the protective cover over the Cosivista.
